

WATERS & CO

Master Business & Project Handover

Strategy, website, offers, pricing, marketing, AI operations and 90-day execution plan

CURRENT DECISION Keep the full service catalogue, but lead with customer-response and workflow systems for service businesses. Validate with paid pilots before expanding.

VERSION 1.0 • 9 AUGUST 2026 • PERTH, WESTERN AUSTRALIA

Document control

Field	Current state
Purpose	Enable a new operator, adviser or AI agent to continue Waters & Co without this conversation.
Scope	Business strategy, service catalogue, prices, website, SEO, marketing, outreach, AI delivery, governance, files and decisions.
Authoritative date	9 August 2026. Reconfirm laws, platform rules, prices and account status before acting.
Live status	Website source and tested ZIP exist locally. Deployment, analytics connection and public campaign launch are not assumed complete.
Brand	Waters & Co only. Malachite green, dark emerald, gold, cream; Fraunces/Georgia-style editorial headings and Jost/Calibri-style body copy.
Public contact rule	Website and QR code only on public marketing assets unless expressly changed.
Document design	compact_reference_guide preset; named Waters brand override for green/gold palette and Georgia headings.

How to use this handover

- Read sections 1–4 before changing positioning, offers or the homepage.
- Use section 5 as the price source until PRICING.md and the website configuration are intentionally updated together.
- Use sections 8–12 as the operating playbook for acquisition, delivery, AI agents and content.
- Record every material change in DECISIONS.md, PROGRESS.md and this handover’s change log.
- Do not send outreach, publish claims, collect personal information or deploy automations without the checks in section 14.

1. Executive decision

RECOMMENDATION Waters & Co is in a viable business, but the original “all services equally” model is too broad for launch. Use one narrow commercial wedge, build proof, then expand.

What the business is now

Waters & Co is a practical implementation and support business. Its commercial centre is helping small service businesses capture more enquiries, respond faster and improve one costly workflow using carefully controlled automation and AI. The company retains additional personal-support and specialist services, but those should not dilute the main acquisition message.

Primary wedge

Layer	Offer	Role
Lead magnet / diagnostic	Local Visibility Check	Low-risk entry; finds gaps in Google presence, customer journey and response.
Fast operational fix	Never Miss the Next Enquiry	Missed-call text-back, lead capture and follow-up improvement.
Higher-value pilot	Practical AI Workflow Pilot	Maps and improves one repetitive workflow with approvals, logs and a clear success measure.
Recurring service	Managed enquiry response and workflow monitoring	Monthly optimisation, monitoring, reporting and controlled improvements.

Initial target market

Start with Perth trades and home-service businesses where missed calls, slow follow-up and inconsistent Google visibility create obvious revenue leakage. Clinics and property managers are credible second tests. Accountants, managed service providers and agencies are potential channel partners for white-label implementation after delivery proof exists.

What not to become

- A generic “AI agency” selling vague transformation.
- A broad social-media management company.
- A generic SEO retainer business.
- A content factory competing on volume and low price.
- A fully autonomous agent provider with weak controls.

- An independent legal, tax, financial, cyber or regulatory adviser outside demonstrated competence and insurance.

2. Business identity and positioning

Brand promise

CORE PROMISE Practical solutions. Clear next steps. Improve visibility, enquiries and everyday workflows without unnecessary complexity.

Positioning statement

For Perth service businesses losing time or enquiries to fragmented processes, Waters & Co identifies the highest-value operational gap, implements a practical fix, and hands over a controlled system the owner can understand. Unlike generic agencies or software resellers, the work begins with the real workflow, uses AI only where useful, and retains visible human approval and escalation points.

Message hierarchy

- Problem first: missed enquiries, slow follow-up, repetitive administration, unclear workflow ownership.
- Outcome second: faster response, fewer dropped leads, saved time, clearer handoffs and measurable improvement.
- Method third: observe, map, pilot, test, document, train and monitor.
- Technology last: AI and automation are tools within the service, not the promise by themselves.

Non-negotiable identity rules

Rule	Application
Name	Use “Waters & Co” only; do not add personal identity to business cards or public collateral.
Contact	Website and QR code only on public assets.
Locality	Use Perth/Western Australia naturally where relevant; do not force “Doubleview” into clunky visible copy merely for SEO.
Tone	Calm, competent, specific and plain-spoken. Avoid hype, fear and implausible AI claims.
Visual system	Malachite imagery, dark emerald surfaces, restrained gold type, high contrast and generous whitespace.
Trust	Explain boundaries, approvals, data handling, exclusions and referral points before work begins.

3. Market and audience priority

Why this direction

Australian small-business conditions support a practical digital-operations offer: the business population is large, Western Australia has been growing, broad organisational AI use remains relatively early, and government programs continue to support digital capability. This creates room for implementation help. It does not prove demand for Waters & Co specifically; only paid-pilot evidence can do that.

Audience order

Priority	Audience	Visible pain	Best first message
1	Trades and home services	Calls missed while on tools; poor follow-up; weak Google profile	How many good enquiries are being lost before a quote?
2	Clinics and appointment businesses	Phone pressure, cancellations, repetitive intake	Reduce avoidable admin while keeping staff in control.
3	Property managers / real estate	Lead response and handoff delays	Respond and route every enquiry consistently.
4	Accountants, MSPs and agencies	Clients need implementation; partner lacks delivery capacity	A scoped implementation partner behind your client relationship.
5	Individuals and community organisations	Digital confidence, legacy and practical support	Patient help, defined scope and clear next steps.

Opportunity filter

- The problem happens frequently.
- There is a clear finish line and measurable before/after state.
- The workflow touches accessible software and permitted data.
- The edge cases can be learned from examples.
- The loss is visible enough that a budget exists.
- A human approval or escalation point can be defined.
- The solution can be repeated for more than one customer.

Adjacent opportunities—later, with conditions

- White-label workflow implementation through trusted professional partners.
- Digital housekeeping subscription for small businesses or older clients.
- Senior digital workshops delivered through organisations.
- Cyber/AI-safety readiness only with a qualified specialist partner.

- AML/CTF operational implementation for affected sectors only with qualified legal/compliance oversight.

4. Offer architecture

Stage	Customer buys	Waters & Co produces	Success evidence
Discover	Visibility or workflow check	Short diagnostic, gap list and ranked action plan	Owner agrees the highest-value problem is real.
Pilot	One bounded improvement	Workflow map, configured system, test cases, training and handover	Agreed metric improves without unacceptable risk.
Manage	Ongoing monitoring	Checks, reporting, exception handling and small improvements	System remains reliable and useful.
Expand	Second workflow / wider rollout	New scoped implementation based on proven pattern	Repeatable results with controlled complexity.

Three launch offers

A. Local Visibility Check

Entry price: \$99 fixed. Review the Google Business Profile, website journey, contact path, review signals and obvious local-search gaps. Deliver a concise ranked action plan. Do not promise ranking positions.

B. Never Miss the Next Enquiry

Setup price: \$349 fixed; managed text-back and lead capture: \$199/month; AI reception or managed follow-up: from \$299/month. Keep automated messages transparent and build clear human handoff.

C. Practical AI Workflow Pilot

Workflow check and implementation plan: \$290 fixed. Pilot: from \$1,290. Multi-step system: from \$2,900. Monitoring and improvements: \$199/month. Scope one workflow and one measurable result.

5. Current service prices

PRICE CONVENTION All prices are AUD. Third-party platform, usage, advertising, travel, scanning, materials and specialist fees are separate. GST is added if applicable. “From” prices require written scope confirmation.

Service	Package	Public price
Google Business Profile	Visibility check/action plan	\$99 fixed
	Profile cleanup/relaunch	\$249 fixed
	Ongoing management	\$149/month
Review systems	Setup	\$149 fixed
	Managed requests and monitoring	\$149/month
	Requests, responses and reporting	\$249/month
Missed-call systems	Text-back setup	\$349 fixed
	Managed text-back and lead capture	\$199/month
	AI reception / managed follow-up	From \$299/month
Land tax / rates valuation	Residential evidence/objection pack	\$590 fixed
	Complex or commercial	From \$990
AI implementation	Workflow check and plan	\$290 fixed
	One-workflow pilot	From \$1,290
	Multi-step system	From \$2,900
	Monitoring and improvements	\$199/month
Real-estate lead response	Setup	\$390 fixed
	Managed service	\$179/month
AI tools for business	One tool, setup and training	\$290
	Two–three tools, sessions and templates	\$490
	Ongoing support	\$120/month
Bookkeeping	Micro, up to 25 transactions	\$169/month
	Small, 26–100 transactions	From \$349/month
Grant finder	Search and shortlist	\$89 fixed
Pension / Centrelink support	New claim support	\$349

	ARO review	\$249
Senior technology support	In person, one hour	\$79
	Remote, one hour	\$59
	Extended, 90 minutes	\$119
	Remote follow-up, 30 minutes	\$45
Crypto literacy	One-to-one education	\$85/hour
	Public group	\$59/person
	Private group, up to eight	\$349
Digital legacy	Starter	\$139
	Full inventory	\$289
	Annual refresh	\$89
Downsizing	Planning and coordination	\$59/hour
	Package	From \$490
	Hands-on sorting/labour	\$80/hour
Photo digitisation	Sorting/project setup	\$149
	Additional curation	\$55/hour
	Scanning/restoration	Supplier cost
Video/podcast repurposing	Ten clips	\$249
	Four episodes per month	\$199/episode

Boundaries that must accompany prices

- Bookkeeping excludes BAS services unless delivered or reviewed by a registered BAS agent.
- Crypto literacy is education and safety only—not trading, financial-product advice or a recommendation.
- Centrelink, valuation, grants and other specialist-support work must state that outcomes are controlled by the relevant authority.
- Complex, regulated or high-risk matters must be referred to an appropriately qualified and insured professional.

6. Website and SEO state

Current website state

- Hero: “Fix the workflow that is costing your business time or enquiries.”
- Homepage focuses on small-business workflow and customer response.
- Three launch offers appear prominently.
- Four practices and all 16 service pages remain available.
- AI trust section explains visible controls and human oversight.
- Enquiry page includes a problem-interest selector that flows into the internal lead message.
- Service pages use fixed or “from” prices with a consistent price note.
- Malachite/gold visual identity, restrained animation and mobile-first layouts are preserved.
- All public routes, policy pages, sitemap and robots file passed local status testing; the form POST and interest capture passed local testing.

NOT YET PROVEN A local test pass is not evidence of live ranking, conversions or production reliability. Confirm deployment, domain, analytics, Search Console, form delivery and real-device behaviour after release.

SEO operating rules

- Write pages for a real customer task; use search terms naturally, not repetitively.
- Give each service page one clear intent, descriptive title, useful heading hierarchy and crawlable internal links.
- Use Perth and service-area context where it helps users; do not clutter the address or copy with suburb repetition.
- Keep prices, scope, author/business details, policies and contact path consistent.
- Publish proof and practical explanations; do not create thin location pages or mass AI content.
- Maintain Core Web Vitals, image dimensions, compression, alt text, reduced-motion support and mobile tap targets.
- Use structured data only when the visible page supports the same claim.
- Never guarantee a ranking or imply a Google affiliation.

Post-deployment checklist

- Confirm HTTPS, canonical domain and one preferred URL form.
- Submit sitemap in Google Search Console and request indexing of priority pages.
- Validate organisation/local-business and service structured data.
- Connect privacy-respecting analytics and record a baseline.
- Test the enquiry form from mobile, desktop and a second network.

- Check page titles, descriptions, Open Graph images and social previews.
- Run Lighthouse/PageSpeed and fix material mobile issues.
- Create a monthly Search Console review: queries, pages, clicks, impressions, CTR and indexing.

7. Brand and asset system

Asset	Use	Rule
Malachite background	Website, covers, selected ads and document accents	Use a dark overlay behind text; preserve legibility.
Gold wordmark	Hero/brand moments	Keep centred optically, with safe space; do not stretch.
Header wordmark	Website/document header	Use on dark background only where contrast is clear.
Google profile logo	Square profile crop	Prioritise centred wordmark/monogram and safe circular crop.
Google cover	Landscape profile cover	Use brand environment; do not rely on small text.
Facebook/LinkedIn covers	Platform-specific crops	Export exact platform variants; keep key content in centre-safe area.
Fraunces / Jost	Brand typography	Fraunces for editorial display; Jost for readable UI/body.

Existing packs

- Waters-and-Co-Complete-Business-Pack.zip — office, marketing, guides and prospect material.
- Waters-and-Co-Platform-Images-Complete.zip — platform-specific social and profile imagery.
- Waters-and-Co-Website-Priced-2026-08-09.zip — latest tested website source with public prices.

8. Acquisition and sales

Tuesday is a learning launch

LAUNCH OBJECTIVE Secure conversations and two paid pilots in one niche—not maximum email volume.

Before sending

- Verify the live website and form.
- Choose one niche and one offer for the batch.
- Manually qualify each business against a real, observable signal.
- Confirm the contact channel and lawful basis for a commercial email.
- Use a truthful subject and sender identity, contact information and functional unsubscribe.
- Prepare a simple call/discovery script and pilot scope.
- Set a follow-up limit and stop promptly after opt-out.

Recommended outreach sequence

Day	Action	Goal
0	Send a small personalised batch based on a visible business signal	Earn a reply, not a click.
2–3	One concise follow-up with a useful observation	Start a short conversation.
5–7	Final respectful close-out	Leave the relationship clean.
After reply	15-minute diagnosis; confirm problem, cost, current process and owner	Decide whether a paid check or pilot fits.

Discovery questions

- What happens from the moment an enquiry arrives until someone owns it?
- Where do enquiries wait, get missed or require repeated copying?
- How often does this happen and what does a missed opportunity cost?
- Which systems and permissions are involved?
- What must a person approve?
- What would a useful result look like in 30 days?
- Can we observe 10–20 real examples before configuring anything?

Sales rule

Sell the job and the measurable improvement, not “AI.” Quote only after confirming scope, third-party costs, approval gates, exclusions and handover. Use deposits and written acceptance where appropriate.

9. Delivery and proof

Standard pilot method

- Observe: shadow the current workflow and collect representative examples with permission.
- Map: document trigger, inputs, decisions, tools, permissions, exceptions and finish line.
- Baseline: record the current response time, handling time, leakage or error rate.
- Design: choose the smallest useful intervention and define human approvals.
- Build: configure in a test environment with minimal access.
- Evaluate: run representative cases, edge cases and failure scenarios.
- Pilot: operate with close review for a defined period.
- Handover: provide SOP, owner, credentials plan, rollback, escalation and training.
- Review: compare baseline with result and decide stop, improve or expand.

Proof asset checklist

- Customer problem and starting state.
- What changed and what remained human-controlled.
- Measured result and observation period.
- Customer quote with written permission.
- Anonymised workflow diagram or before/after screenshot where permitted.
- Limits, exceptions and next improvement.

PROOF PRIORITY The biggest missing business asset is credible proof. Two well-run paid pilots are more valuable than dozens of new pages or generic posts.

10. Applied lessons from the eight videos

The following is a business-specific synthesis, not a transcript or endorsement of every tactic. Techniques that conflict with Australian privacy, spam, platform or professional rules are excluded or adapted.

Video 1 — Marketing agents and signal-based prospecting

- Real signals beat undifferentiated volume. Monitor business-visible events—new locations, poor response paths, job ads, outdated profiles, public complaints or workflow changes—then decide whether the business fits the target profile.
- An “agent” is software plus current data plus a bounded decision loop. Human judgement still chooses sources and validates the target.
- For Waters & Co, create a research queue that produces a short public-business brief and a proposed observation; a person approves any outreach.

WATERS & CO GUARDRAIL Do not scrape or harvest personal data. Use public business contact channels, relevance checks, consent where required and ACMA-compliant messages.

Video 2 — Four useful internal AI roles

- Coordination: triage inbox/calendar work and prepare the next-action queue.
- Creativity: draft proposals, content variations, customer explanations and templates.
- Clarity: compare documents, research options and surface risks or missing facts.
- Coaching: rehearse discovery calls, objection handling and handovers.
- Every agent job needs a job, permitted tools, rules/categories, required output and boundary.

WATERS & CO GUARDRAIL Use an autonomy ladder: make work visible, then efficient, then partly automatic; delegate slowly. Begin read-only or draft-only—never automatic sends.

Video 3 — Premium positioning

- Premium is created by positioning, content, partnerships, placement, presentation and consistency—not price alone.
- Remove category confusion: Waters & Co is a practical implementation partner, not a bargain generalist or vague futurist.
- The brand system, fixed pricing, clear scope, calm claims and professional handover should all signal control and reliability.

WATERS & CO GUARDRAIL Premium does not mean ornate or expensive. It means the customer understands the value, process, boundary and expected standard.

Video 4 — Newsletter as an owned channel

- An opted-in email audience reduces dependence on search and social platforms.
- Growth usually comes from several small, consistent systems rather than one trick.
- One useful article can become a Google Business post, LinkedIn post, Facebook post, email and sales follow-up.

WATERS & CO GUARDRAIL Do not launch a high-frequency newsletter before the business has an opt-in mechanism and useful source material. Recommended later: monthly “Practical Business Brief.”

Video 5 — Content tied to the business model

- Waters & Co plays the services-and-offers game, not the media/views game. Qualified attention matters more than reach.
- Effective content earns attention, gives value, builds trust and leads to a relevant next step.
- Long-form explanations build trust; short-form posts distribute the idea and test hooks.
- A narrow ideal customer supports clearer content and stronger pricing.

WATERS & CO GUARDRAIL Prioritise workflow teardowns, problem diagnosis, checklists, old-versus-new comparisons, trust/boundary explanations and real case evidence.

Video 6 — Forward-deployed implementation

- The work starts inside the real customer workflow. Business understanding and implementation capability belong together.
- Decide explicitly where intelligence helps and where deterministic rules or people are safer.
- Use human-in-the-loop approvals, audit trails, evaluations, KPIs and service expectations.
- Repeated customer patterns become reusable modules and offers.

WATERS & CO GUARDRAIL Embody this method without using technical jargon in the sales message: observe, map, select, build, test, hand over and improve.

Video 7 — Managing AI agents

- Several agents require management: priorities, queues, approvals, project limits and clear ownership.
- Credentials must be separate, least-privilege and revocable.
- Agents should test and retest systems, but a named person remains accountable.
- High-stakes threads and exceptions need visible escalation.

WATERS & CO GUARDRAIL Use a simple control plane: one backlog, limited concurrent work, logs, approval gates, scheduled checks and a kill switch. Never treat agents as set-and-forget staff.

Video 8 — The job is the product

- Sell the completed job or outcome, not access to software.
- Choose work with frequency, a clear finish line, usable software access, learnable edge cases and a visible cost.
- Observe 10–20 human examples before building.
- Specify trigger, context, tools, permissions, approval, escalation and success.
- Start with a minimal useful agent that drafts, triages, coordinates or performs a bounded action.
- The real product includes logs, controls, approvals, handoffs, testing and evaluation—not just a prompt.
- Sell two or three pilots in the same niche, then productise the repeated pattern.

WATERS & CO GUARDRAIL Choose one distribution platform first and use practical workflow teardowns to demonstrate expertise.

11. AI-agent operating model

Agent specification

Field	Required answer
Job	What exact work is delegated?
Trigger	What starts the job?
Context	Which records and examples may it see?
Tools	Which systems may it read or change?
Rules	What classifications and decisions are allowed?
Output	What format and destination are required?
Approval	What must a person approve before action?
Escalation	Which uncertainty, risk or exception stops the agent?
Success	Which measurable result defines useful completion?
Logging	What evidence is retained for audit and improvement?
Rollback	How is the action reversed or system disabled?

Autonomy levels

Level	Agent may	Default use
0 — Observe	Summarise and flag only	New workflow or sensitive data.
1 — Draft	Prepare work for human approval	Emails, content, proposals, replies.
2 — Recommend	Rank options and explain rationale	Lead triage and next-step queues.
3 — Bounded act	Take pre-approved low-risk actions	Only after testing, logs and rollback.
4 — Expand	Handle broader cases	Not a launch default; requires evidence and governance.

Internal agents to build first

- Morning queue: assemble leads, active work, deadlines and blocked decisions.
- Research brief: summarise a public business signal and fit, without scraping personal data.
- Proposal drafter: convert approved discovery notes into scoped options and exclusions.
- Content repurposer: turn one approved case/article into platform-specific drafts.
- QA checker: compare deliverables against scope, brand, accessibility and compliance checklists.

- Follow-up assistant: prepare—not send—approved next-step messages and opt-out checks.

12. Content, newsletter and social

Content pillars

Pillar	Examples	Call to action
Lost enquiries	Missed-call audit, response-time checklist, lead handoff map	Request a Visibility Check.
Workflow friction	Before/after maps, admin bottlenecks, repetitive task examples	Book a workflow check.
Practical AI	Where AI helps, where it should not, approval design	Discuss one-workflow pilot.
Local visibility	Profile completeness, review process, customer journey	Request profile cleanup.
Trust and proof	Case results, limitations, safety and handover	View the method / enquire.
Personal digital support	Plain-language guides for seniors and families	Choose a defined support package.

Channel roles

- Google Business Profile: local proof, service updates, photos and customer intent.
- LinkedIn: implementation thinking, partner relationships and business-owner trust.
- Facebook: local community presence, approachable education and retargeting later.
- Website: authoritative service detail, conversion and proof.
- Email: permission-based follow-up and, later, the monthly owned newsletter.

Monthly Practical Business Brief — later phase

Format: one operational problem, one practical AI opportunity, one short checklist and one next step. Publish only to opted-in subscribers. Use the article as the source for social posts; do not add cold prospects to the list.

Content quality gate

- Is it for one identifiable audience and problem?
- Does it include a useful observation or method?
- Is every claim supportable?
- Does it add proof, judgement or experience beyond generic AI text?
- Is the next step relevant and proportionate?
- Has privacy/confidential information been removed?

- Does the platform version fit its crop, length and accessibility requirements?

13. Ninety-day implementation roadmap

Period	Outcome	Actions
Days 0–7	Launch-ready and measurable	Deploy/verify site; confirm form and analytics; choose Perth trades/home services; send a small compliant outreach batch; book diagnosis calls; create pilot SOW and baseline sheet.
Days 8–30	First paid evidence	Run calls; sell two paid checks/pilots; observe real examples; deliver one bounded improvement; collect baseline and result; document exceptions; request permission for proof.
Days 31–60	Repeatable offer	Refine scope/pricing; repeat in same niche; create case page; develop referral/partner brief; build draft-only internal agents; publish two substantive workflow pieces.
Days 61–90	Decision and controlled scale	Evaluate gates; keep/change/stop offer; offer recurring monitoring to successful pilots; test one partner channel; establish monthly reporting; only then consider second niche or newsletter.

Week-one operator checklist

- Name one accountable owner.
- Confirm ABN/entity, GST status, insurance and contracting details.
- Confirm live URL and form destination.
- Select 20–30 well-qualified businesses—not a mass list.
- Prepare compliant message, opt-out register and follow-up rule.
- Create discovery notes template, SOW, invoice and payment process.
- Define pilot metric and baseline capture.
- Schedule Friday review: conversations, objections, paid work and changes.

14. Risk, privacy and compliance

OPERATING PRINCIPLE Use the least data, least access and least autonomy needed to produce the agreed result. Stop and refer when the work crosses competence, insurance or regulatory boundaries.

Commercial email

Before any Australian commercial email, confirm consent or another lawful basis under the Spam Act, identify the sender, provide contact information and include a working unsubscribe. A published address is not a blanket invitation; relevance to the person's role and any accompanying restriction must be checked. Do not use harvested lists.

Privacy and AI

- Tell customers what information is collected, why, where it goes and who can access it.
- Do not place sensitive or confidential data into consumer AI tools without authorisation and appropriate controls.
- Use access separation, multi-factor authentication, revocation, logs and data-retention rules.
- Review AI outputs and prevent unsupported or discriminatory decisions.
- Have a manual fallback and incident contact.

Claims and professional boundaries

- No guaranteed SEO rank, grant, tax, Centrelink, valuation, financial or business result.
- No misleading urgency, fake testimonials, fabricated case studies or implied platform affiliation.
- No tax/BAS, legal, financial-product, cyber or compliance advice beyond authorised competence.
- Document referrals and the point at which Waters & Co work stops.
- Update terms, privacy notice and customer scope when tools or data flows change.

15. Metrics and decision gates

Weekly scorecard

Area	Metric	Early target / interpretation
Prospecting	Qualified businesses researched	Quality first; 20–30 for initial test.
Engagement	Positive replies / qualified contacts	At least 10% to genuine conversation is encouraging.
Sales	Discovery calls and paid pilots	Two paid pilots within 30–45 days.
Problem fit	Same workflow repeated	A repeated pattern is required for productisation.
Delivery	Effective hourly rate and support load	Must support viable margin without owner overload.
Outcome	Response time, time saved, leakage or error reduction	Use one primary metric per pilot.
Retention	Pilot customers requesting ongoing monitoring	At least one request is an encouraging signal.
Risk	Incidents, exceptions, manual overrides	Trend down; material incident triggers review.

Continue / change / stop

Decision	Evidence
Continue	At least 10% of qualified contacts create genuine conversations; two paid pilots; repeated workflow; acceptable delivery economics; at least one recurring request.
Change niche or offer	Pain is acknowledged but customers will not pay; systems vary too much; support destroys margin; tools cost too much; customers only want generic training; or risk remains high.
Stop focused offer	After two well-qualified tests there are no paid pilots, the work cannot be standardised, the outcome cannot be measured, or the owner does not want to deliver it.

16. Systems, files and deployment

Repository map

Path	Purpose / handover note
worksite/website/	Flask website source. Current user changes are uncommitted; do not reset or overwrite blindly.
worksite/website/webapp/config.py	Public service catalogue and prices.
worksite/CLAUDE.md	Operating context for PA/general-manager style assistance.

worksite/PRICING.md	Price source to keep aligned with the website.
worksite/DECISIONS.md	Material decision record.
worksite/PROGRESS.md	Implementation status.
worksite/ROADMAP.md	Planned work.
worksite/docs/	Research, audits, deployment and implementation references.
worksite/wave1/, wave2/, wave3- unscoped/	Service playbooks, pricing sheets and experimental opportunities.
worksite/ops-hub/	Internal operations hub; verify access and deployment separately.
worksite/Waters-and-Co-Website- Priced-2026-08-09.zip	Latest tested website archive before this handover was added.

Infrastructure context

Project notes reference Cloudflare, Render, Stripe, GitHub and Tailscale. Credentials and account ownership must be verified directly in the authorised account—not inferred from documents. Keep secrets out of repositories and handover documents. Use separate least-privilege access, MFA and an owner-controlled recovery method.

Release procedure

- Review git status and preserve user-owned changes.
- Run local route, form and pricing checks.
- Run responsive and accessibility checks.
- Create a dated ZIP from the website source and verify archive integrity.
- Deploy through the authorised repository/platform process.
- Verify production URL, HTTPS, form, email/draft handling, structured data, sitemap and robots.
- Record release, commit/deployment identifier and rollback method in PROGRESS.md.

17. Open decisions and handover checklist

Information still required

- Confirmed legal entity/ABN and GST status.
- Authorised contracting name and invoice/payment terms.
- Current insurance coverage and explicit service exclusions.
- Live domain, public form destination and data-retention process.
- Primary niche for the first 30-day test.
- Which outbound contacts have consent or a documented basis for contact.

- Owner capacity per week and maximum concurrent pilots.
- Approved third-party tools, account ownership and monthly software budget.
- Proof/testimonial permissions from any prior work.
- Final decision on whether personal-support services remain actively promoted or primarily referral/inbound.

Handover acceptance checklist

- Recipient can state the primary audience, problem and offer in one sentence.
- Recipient knows which prices are fixed and which require scope.
- Recipient can locate the website configuration, decision log, pricing file and latest archive.
- Recipient understands that local tests do not equal live deployment.
- Recipient knows the outreach compliance and opt-out process.
- Recipient can run the pilot delivery method and evaluation gate.
- Recipient understands AI autonomy levels, approvals and credential rules.
- Recipient can identify work that requires referral to a qualified professional.
- Recipient has a named owner and next seven-day action list.

NEXT ACTION Verify the production site, choose the first niche and send a small, compliant, personalised test batch tied to the Local Visibility Check or missed-enquiry problem. Use responses to refine the offer; do not broaden yet.

Appendix A. Source register

Source	Use
Internal source	0. START HERE; Service Reference Guide; Website Written Content; Infrastructure & Accounts; repository strategy, pricing, audit and implementation documents.
Video inputs	Eight user-supplied transcript files covering marketing agents, four internal agent roles, premium positioning, newsletters, content, forward-deployed engineering, agent management and agent-as-software business models. This handover paraphrases and applies concepts; it does not reproduce transcripts.
